If a deadkey is typed twice, it will produce its original value (If you type a semicolon two times you will get a semicolon).

Deadkeys may be combined to get double. They may be combined in any order. For example:

; + ' +   a e i o u A E I O U
              ạ́ ẹ́ ị́ ị́ ụ́ Ạ́ Ẹ́ Ị́ Ọ́ Ụ́ and

' + ; +   a e i o u A E I O U
              ạ́ ẹ́ ị́ ị́ ụ́ Ạ́ Ẹ́ Ị́ Ọ́ Ụ́ (the same result)

There are other keyboards available for underlined and odd vowels. You may contact Heidi Rosendall at 08035853427 or Patrick_Rosendall@wycliffe.org for technical assistance.
